

HTML Collections Queue

Along with developing its build-to-scale Collections Package solution, CUTEK has created yet another new collections solution that empowers your credit union to modify its collections queue without having to do any coding. Our new product, called HTML Collections Queue, allows your credit union to add or make changes to the collections queue in minutes simply by changing the parameters — thus, helping to reduce your delinquencies.

HTML Collections Queue is very flexible allowing your credit union to make immediate changes in-house, saving time and costs associated with collection operations. It consists of easy-to-navigate check boxes and drop-down menus in an HTML form that can quickly create new parameters related to collections.

HTML Collections Queue uses a set of parameters or templates from which your credit union can choose. Instead of spending a lot of time programming, you pick one parameter, test the changes, install it in production — which then allows collections to move forward with the new changes. Your credit union can do all this in one day to experience enhanced efficiency improvements in your collection operations.

Features:

- > **Easy-to-navigate check boxes**
- > **Drop-down menus in an HTML form that can quickly create new parameters related to collections**
- > **Very flexible allowing credit unions to make immediate changes in-house**
- > **Add or make changes to the collections queue in minutes simply by changing the parameters**

Benefits:

- > **Reduce delinquencies**
- > **Huge efficiency improvements in collection operations**
- > **Choose a parameter, test it, and turn it around all in one day**
- > **Enables credit unions to implement more quickly and attend to new needs at hand**
